

# UNI-DS6

Electrical schematic

This document provides a complete electrical schematic of the development system, which is a high-quality, reliable and environmentally friendly product. It is designed to be used in a wide range of applications, from industrial to consumer electronics. The system is built using the latest SMD (Surface Mounting Device) technology, which ensures high reliability and long life. Besides, the components are mounted by machines of the last generation using lead-free alloy for soldering. What we have now as a result is a high quality and reliable product that meets the world's highest standards being applied in electronics industry and environmental protection.

## Development system

MikroElektronika assumes no responsibility or liability for any errors or inaccuracies that may appear in the present document. Specification and information contained in the present schematic are subject to change at any time without notice.
